

BREED CODE: SIA –SIAMESE

GENERAL TYPE STANDARD

The Siamese cat should be a beautifully balanced animal, with head, ears and neck carried on a long, svelte body, supported on fine legs and feet, with tail in proportion.

The head and profile should be wedge shaped, neither round nor pointed. The mask complete, connected by tracings with the ears (except in kittens), the eyes a deep blue; a green tinge to be considered a fault. The expression should be one of alertness and intelligence.

It should be noted that in all colours, kittens may not show full masking, or the full adult colour on legs and tail. This should not be considered a fault.

Head and Ears: Head long and well proportioned, carried upon an elegant neck, with width between ears, narrowing in perfectly straight lines to a fine muzzle, with a straight profile and firm chin in line with the upper jaw. Ears large and pricked, wide at base, with the outer edges continuing the line of the wedge.

Eyes: Oriental in shape and slanting towards the nose, but with width between. No tendency to squint.

Eye Colour: Sealpoint and derivatives – clear brilliant deep blue. All others – clear bright vivid blue.

Points: Mask, ears, feet and tail: dense and clearly defined colour, matching in basic colour on all points, showing clear contrast between points and body colour. Mask complete and (except in kittens) connected by tracings with the ears.

Body and Tail: Medium in size, body long and svelte, legs proportionately slim, hind legs slightly higher than the front, feet small and oval, tail long and tapering. The body, legs, feet, head and tail all in proportion, giving the whole a well balanced appearance.

Coat Length and Texture: Very short and fine in texture, glossy and close lying.

Faults which should not militate against an otherwise good exhibit:

1. Stud damage on a queen.
2. Jowls in males.
3. Tail slightly kinked at the extremity.

Withhold challenge certificate or first place in kitten classes for:

1. An obvious receding or protruding jaw.
2. White toe or toes (except in bicolour or harlequin).
3. Point and body colour which does not adhere to the standard set for the particular colour.
4. Incorrect eye colour.
5. Permanent squint in eye or eyes.
(Definition of a squint: When the eyes are so placed they appear to look permanently at the nose.)
6. Any kink not at extremity of tail.

BASE COLOURS

Code:	Colour	Body Colour	Point Colour	Nose Leather, Pads, & Notes
SIA	Sealpoint	Cream, shading gradually into pale fawn on the back. Kittens paler in colour.	Dense and clearly defined seal brown.	Seal brown/black.
SIA A	Bluepoint	Glacial white, shading gently into grey- blue on the back, the same cold tone as the points.	Grey-blue.	Grey-blue. Fault: Fawn shading is to be considered undesirable.
SIA B	Chocolatepoint	Ivory, shading, if at all, to the colour of the points.	Light chocolate ranging to café-au-lait.	Chocolate to pink.
SIA B/1	Cinnamonpoint	Ivory, shading, if at all, to the colour of the points.	Rich warm toned cinnamon brown.	Light tan.
SIA C	Lilacpoint	Off-white (magnolia), shading, if at all, to the colour of the points.	Mushroom-pink.	Faded lilac.
SIA C/1	Fawnpoint	Very pale ivory, shading, if at all, to the colour of the points.	Pale pinkish fawn.	Fawn.
SIA D	Redpoint	White, shading if at all to apricot on the back.	Ranging from apricot to red.	Pink. Note: Whilst not desirable, barring on the tail of the redpoint Siamese is not to be considered a fault.

Code:	Colour	Body Colour	Point Colour	Nose Leather, Pads, & Notes
SIA G	Creampoint	White, shading, if any, gradually into the colour of the points. The body colour should be free from barring.	Ranging from rich Devon cream to a pale sand.	Pink. Note: The point colour does not refer to the cream body colour of the sealpoint Siamese, and should be as for the cream in British Shorthair or Burmese.

SIA k/G	Apricotpoint	White, shading to tone with points.	Warm apricot, with a soft metallic sheen. While it is not desirable, allowances should be made for slight barring on the mask, legs and tail.	Pink.

TORTIEPOINT

Barring on the tail, whilst not desirable, should not militate against an otherwise good exhibit. However, the body colour should be free from barring. A blaze is desirable.

LYNXPOINT

Care should be taken to see that the background colour on the mask, ears, legs and tail are truly indicative of the colour under which the exhibits are shown.

Tabby markings on the body are a definite fault, as these tend to give the undesirable appearance of a solid animal. It is likely that nose leathers, pads and eye trims may vary in colour from the Standard, but this should not militate against an otherwise good exhibit. A white tip at the end of the tail is a fault.

Kittens very often do not show the full mask, but definite markings should be discernible at an early age. Their thumb prints may not be very obvious. Here again, these could develop with age.

Body Colour: Pale coat, shading if at all to the colour of the points.

Point Colour:

Mask: Clearly defined stripes, especially round the eyes and nose. Distinct markings on cheeks and darker spotted whisker pads.

Legs and Feet: Varied size broken stripes with solid markings on the back of the legs.

Tail: Varied size, clearly defined stripes ending with a solid tip.

Ears: Solid coloured, no stripes but clearly thumb marked.

TORTIE LYNXPOINT

These cats usually resemble lynxpoints rather than tortiepoints. Distribution of patching immaterial.

Body Colour: Pale coat, preferably free from body markings.

Point Colour: Patched with red and/or cream over tabby pattern.

Mask: Clearly defined stripes, especially round the eyes and nose. Distinct markings on cheeks, and darkly spotted whisker pads.

Ears: Mottled, with thumb marks as clear as possible.

Legs and Feet: Varied size broken stripes with solid markings on the back of the legs.

Tail: Varied size clearly defined stripes ending in a solid tip, but mottling permissible.

Nose Leather

and Pads: Mottled.

SMOKEPOINT

The smokepoint effect is produced by a silvery undercoat combined with overhair that is tipped in colour with a silvery root. There is great variation in the degree of smoking in cats, and breeders should select for those with the greatest degree of silvery roots and undercoat. In repose, the cat appears as a normal pointed cat.

The undercoat of the point colour of all smokepoints is slightly lighter than the roots of the shaded hairs. Scattered white hairs and rusty or other shadings should not be severely penalised in an otherwise good kitten. In all tortie varieties, type (body conformation) is deemed more important than distribution of patching.

SILVER LYNXPOINT

The degree of silvering varies. Some cats look like lynxpoints, while others show extreme contrast between the colour and the ground. The ideal is the silver with the extreme contrast.

BICOLOUR

Care should be taken to see that the background colour on the mask, ears, legs and tail are truly indicative of the colour under which exhibits are shown.

Body colour of a bicolour Siamese is identical to that of the non-bicolour standard, except that patches of white are required. Preferably one-third and not more than one-half of the coat (including the points) to be white. The patches of white may be difficult to discern in a kitten, and allowance should be made for this. There is no requirement for the white colouring to fall in anything other than random patches, although symmetry of distribution is desirable.

Points colour is identical to that of the non bicolour standard. Patches of white may also occur in the points colour. Ideally, patches of white should occur in all points with the exception of the tail, which should preferably be solid (i.e., no white).

Nose Leather & Pads: Colouration of these areas in bicolour Siamese follows the standard for non-bicolour Siamese, except where patches of white occur in the coat in close proximity, the nose leather and pad pigmentation will be pink.

Faults:

1. The random sprinkling of white hairs throughout the main colour, or coloured hairs in the white, is a serious fault.

Withhold challenge certificate or first place in kitten classes for:

1. Incorrect proportion of either colour.
2. Locketing.
3. Any other eye colour than blue.

NOTE: Since this is a point restricted cat, allowances must be made for lack of full expression of the piebald on the cat until 18 months of age since the white colouration matures with the point colouration of the cat, as does the shading on the body.

HARLEQUIN

Care should be taken to see that the background colour on the mask, ears, legs and tail, where present, is truly indicative of the colour under which exhibits are shown. Points colour is identical to that of the non-harlequin standard. Body colour of a harlequin patterned Siamese is identical to that of the non-harlequin standard, except that the harlequin is basically a white cat with colour being restricted to the head in patches or spots, and the tail. A few small body spots are allowable. The breed must be penalised if the number and/or size of the colour spots is appreciably more than laid down in the standard. The random sprinkling of white hairs throughout the coloured areas or coloured hairs on the white is a serious colour fault. The patches of white may be difficult to discern in a kitten, and allowance should be made for this.

Nose Leather & Pads: Pink. Where there are coloured areas in the points which include the nose and/or paw pad leather, then the colour in those areas will be as for the Siamese.

Withhold challenge certificate or first place in kitten classes for:

1. Incorrect proportion of either colour.
2. Locketing.
3. Any other eye colour than blue.

NOTE: Since this is a point restricted cat, allowances must be made for lack of full expression of the piebald on the cat until 18 months of age since the white colouration matures with the point colouration of the cat, as does the shading on the body.
