

BREED CODE: BUR - BURMESE

GENERAL TYPE STANDARD

The Burmese is an elegant cat of medium foreign type, which is positive and quite individual to the breed. Ear set, eye shape and brow line, combine to form the distinctive Burmese frown. Any suggestion of either Siamese type or cobbiness of the British cat must be regarded as a fault.

Head

The head carried on a medium neck, should be slightly rounded on top, with good breadth between the ears, having wide cheekbones and tapering to a short blunt wedge. The jaw should be wide at the hinge and the chin firm, a muzzle pinch is a fault, the outer line of the ears continuing the shape of the upper part of the face. This may not be so apparent in mature males who can develop a fullness of cheek.

In profile the head to show good depth between the top of the skull and the lower jaw. The brow to be slightly rounded. There should be a distinct nose break followed by a straight nose ending with the tip of the nose in the same vertical plane as the chin. The lower jaw to show a good depth of chin.

Ears

Ears should be medium in size, set well apart on the skull, broad at the base, with slightly rounded tips. In profile, the ears should be seen to have a slight forward tilt. Allowance to be made for correctly shaped but over-large ears in a kitten, when the head size and shape are still developing.

Eye Set

The eyes, which must be set well apart, should be large and lustrous, the top line of the eyes showing a straight oriental slant towards the nose, the lower line being round. Either round or slit eyes are a fault.

Eye Colour

Eyes should be any shade from yellow to amber, with golden yellow preferred. Eye colour is sensitive to light intensity, should be assessed under identical light conditions moderately diffuse daylight for preference. Allowance made for developing colour in kittens and colour dilution in an older cat.

- Body** The body should be of medium length and size (allowance to be made for larger size in males), feeling hard and muscular, and heavier than its appearance indicates. The chest should be strong and rounded in profile, the back straight from shoulders to rump.
- Legs** Legs should be slender and in proportion to the body. Hind legs slightly longer than front; paws neat and oval in shape.
- Tail** The tail should be straight and of medium length, not heavy at base, and tapering only slightly to a rounded tip without bone defect. A whip tail or kink is not permissible.
- Coat** The coat should be short, fine, and satin-like in texture, lying close to the body. The glossy coat is a distinctive feature of Burmese and is indicative of good health.
- Condition** Should be well muscled, with good weight for size, carrying no fat, lively and alert, with a firm feel when handled.
- Colours** In all colours the under-parts will be slightly lighter than the back. A coat free from barring, or spotting, should be aimed for in all colours. Top awards should be withheld from mature cats (over 2 years of age) showing decided contrast between coat colour and points. The individual colour descriptions are for mature adults. Allowance should be made in kittens and adolescents for a lighter coat colour than the adult standard specifies.
- The presence of a few white hairs may be overlooked in an otherwise excellent cat, but a noticeable number of white hairs, or a white patch, is a serious fault. A light sprinkling of white hairs is allowed over the shoulder, where damage may result from injections, or from other cats, as for breeding queens.

Faults:

1. Tabby bars, spots or blotches on body or tail. This in effect excludes all patterns except the ticked tabby pattern.
2. Any eye colour other than yellow or amber.
3. Whip tail, or a short, thick tail, invisible tail-bone defect.
4. Profile straight, marked break or 'stop'.
5. Small ears.
6. Nose showing bumps.
7. Nose leather falling back markedly, i.e., tip of nose not in a vertical line with chin.
8. Protuberant eyes.

Withhold challenge certificate or first place in kitten classes for:

1. Green eyes.
2. A patch or noticeable number of white hairs.
3. Visible tail kinks.
4. Siamese or British body type.
5. Lack of weight or condition.
6. Flat or dished brow, uneven skull or cranial defect.

COLOUR CHARTS

Code	Colour	Coat Colour	Nose Leather & Pads	Other
BUR	Seal	Solid warm dark seal brown, shading almost imperceptibly to a slightly lighter shade on the underparts; apart from this and slightly darker ears and mask, there should be no body shading or markings of any kind.	Brown.	
BUR A	Blue	Solid silver grey only very slightly darker on the back and tail. There should be a distinct silver sheen on rounded areas such as ears, face and feet.	Grey.	
BUR B	Chocolate	Warm milk chocolate. Ears and mask may be slightly darker, but legs, tail and lower jaw should be the same colour as the back. Evenness of colour overall very desirable.	Warm chocolate brown. Pads: Cinnamon pink shading to chocolate.	
BUR C	Lilac	Pale delicate dove-grey, with a slightly pinkish cast giving a rather faded effect. Ears and mask may be slightly deeper in colour.	Lavender pink. Pads: Shell pink in kittens, becoming lavender pink in adults.	
BUR B/1	Cinnamon	Warm light coppery cinnamon, with allowance for darker mask and ears.	Light Cinnamon Pads: Bright pink in kittens, maturing to very light cinnamon with pinkish undertones.	
BUR C/1	Fawn	Very pale pearly fawn with pinkish and creamy undertones.	Pale Grey Pads: Bright pink in kittens, maturing to extremely pale grey with pinkish undertones.	

Code	Colour	Coat Colour	Nose Leather & Pads	Other
BUR D	Red	Light tangerine. Slight tabby markings may be found on the face, and small indeterminate markings elsewhere (except on sides and belly) are permissible in an otherwise excellent cat. Ears should be distinctly darker than the back.	Pink	
BUR G	Cream	Soft cream with a distinct bloom which gives a powdery effect. Slight tabby markings may be found on the face, and small indeterminate markings elsewhere (except on the sides and belly) are permissible in an otherwise excellent cat. Ears should be only slightly darker than the back coat colour.	Pink	

RUSSET

Russet Burmese can presumably occur in any base colour. The different base colours are very obvious in kittens but much less so in the adult cat. Agouti and non-agouti cats are very similar in appearance also.

There are several differences between kittens and adult cats; development of the adult coat pattern and colour takes more than a year and the time taken is rather variable.

Russet kittens have colour and markings almost identical to non-russet tabby kittens of the same age and base colour, but lack crisp ticking and have pale fur around the paw pads, tail-tip and genital area. As russet kittens grow, the solid base colour areas are progressively overlaid with gold to light tangerine, starting at the head, which usually turns entirely reddish. On the dorsal surface of the body, broad tipping of the fur with gold to light tangerine develops gradually. There is also reduction in density of colour in the bottom half of the hair nearest the skin. The mature cat is superficially yellow to reddish all over, but with the base colour in the dorsal undercoat visible to an extent that varies between individuals and with coat changes during the year. As in reds and creams, minor barring on the kneecaps and inside the front legs is not a major fault. The nose leather is entirely pink and the paw pads in all colours are initially pale, eventually losing all pigment to become bright pink. Ears show thumb prints.

Note: Descriptions in the colour charts below refer to the **adult cat**.

CARAMEL

Accepted across all Burmese varieties.

Code	Colour	Coat Colour	Nose Leather & Pads	Other
BUR k	Caramel	Warm toned brownish lilac/fawn on body. Legs and tail may shade to pale apricot, honey beige. Denser colour on face and ears, paler on the undersides. Metallic sheen on hocks, ears and facial markings.	Nose leather, pads and eye rims a pinkish fawn.	
BUR k/G	Apricot	Cool dusty cast over intense pinkish cream. Denser colour on mask and ears, paler undersides. Metallic sheen on hocks, ears and facial markings.	Nose leather and pads pink.	

TORTIE

The coat may display two shades of its basic colours and may thus appear to display three or even four colours. The colours may be mingled or blotched, without any obvious barring; blazes, solid legs or tail are all permissible. In all tortie varieties, type (body conformation) is deemed more important than distribution of colour.

Code	Colour	Coat Colour	Nose Leather & Pads	Other
BUR E	Seal Tortie	A mixture of brown and red.	Plain or blotched, brown and pink.	
BUR E/A	Blue Tortie	A mixture of blue and cream.	Plain or blotched, blue and pink.

SMOKE

A non-agouti cat with the 'silver' gene is a **smoke**.

The smoke effect is produced by a silvery undercoat combined with overhair that is tipped in colour with a silvery root. In repose these cats will appear as solid coated cats, in motion or on parting the hair of the coat, the white undercoat will show. There is great variation in the degree of 'smoking' in cats, and breeders should select for those with the greatest degree of silvery roots and undercoat. The undercoat of all smokes is slightly lighter than the roots of the shaded hairs. Trace markings on the tail, limbs and forehead are allowable but should be considered undesirable, and should not occur elsewhere. Scattered white hairs and rusty or other shadings should not be severely penalised in an otherwise good kitten.

SILVER TABBY

An agouti cat with the 'silver' gene is a **silver tabby**.

The degree of silvering in these cats shows great variety. Some look the same as normal tabbies, while others show extreme contrast between the colour and the ground. The ideal is the silver with the extreme contrast. The silver tabbies must display only the ticked tabby pattern.

Note: Markings on the extremities may be entirely absent, or range from slight shading, to kneecaps to distinct stripes.
